2. MANUAL ACTIVATION OF DETERGENT AND RINSE AID DISPENSERS

When replacing detergents may be necessary activate the dispensers to fill hoses. In the following paragraphs is explained how activate the dispensers via User Interface.

2.1. Detergent Dispenser Activation

Switch on the dishwasher.

Press and hold down CYCLE_2 and CYCLE INFINITE keys, after two 'beep' the detergent dispenser starts work for 20 sec.

2.2. Rinse Aid Dispenser Activation

Switch on the dishwasher.

Press and hold down CYCLE_1 and CYCLE INFINITE keys, after two 'beep' the rinse aid dispenser starts work for 40 sec.

3. RINSE PUMP MANUAL ACTIVATION

Use this function to empty the boiler (if the dishwasher is not to be used for a long time, for maintenance operation: ex. before replacing main board).

Switch on the dishwasher.

Close the door and press and hold down DRAIN and CYCLE INFINITE keys. A buzzer signal indicates the rinse pump activation and the display shows three blinking lines. Three beeps indicate the cycle end.

4. DETERGENT AND RINSE AID DOSAGE

In this paragraph is explained how to set the working time for the detergent and rinse aid dispensers. For each dispenser there are two parameters: the initial time and the time during cycle execution.

UEn General Parameters

Sym.	Parameter Description	Unit	Min	Max	Factory Default
<i>dIn</i>	Initial Detergent Dosage (during filling tank)	[s]	0	240	90
<i>rIn</i>	Initial Rinse Aid Dosage (starts when tank filled)	[s]	0	180	10
<i>dEt</i>	Detergent Dosage During Cycle Execution (during wash phase)	[s]	0	182(*)	8
<i>rAi</i>	Rinse Aid Dosage During Cycle Execution (when refilling boiler)	[s]	0	62 (*)	4

How change the duration:

- Switch OFF and switch ON the dishwasher;
- Enter into the USER SETTING mode by pressing and hold down ON/OFF and CYCLE_1 keys for at least **five seconds** the display shows **UEn** (Fig.3.1);
- Press CYCLE_INFINITE. The display shows alternatively the symbol *dIn* and the duration in seconds (Fig.3.2 and 3.3);
NOTE: If User Interface v.3.00 tank led is on if value correspond to factory default (Default 1, HOOD TYPE).
- Use CYCLE_1 key to decrease the duration and CYCLE_2 key to increase (Fig.3.3);
- After settled the duration press CYCLE_INFINITE key to **store value**. The display shows the next parameter (Fig.3.4) and the corresponding value (Fig.3.5);
- In the same way is possible to change the other duration; when finished switch OFF and switch ON.

(*) Note for external dispensers:

- If $dEt = 181$ the **detergent dispenser** works when **WASHING PUMP** is being activated; at the same time voltage is supplied between connectors **L17-L19** (main terminal box);
- If $dEt = 182$ the **detergent dispenser** works when **LOADING EV** is being activated to re-fill boiler level; at the same time voltage is supplied between connectors **L17-L19** (main terminal box);
- If $rA = 61$ the **rinse aid dispenser** works when **LOADING EV** is being activated to re-fill boiler level; at the same time voltage is supplied between connectors **L18-L19** (main terminal box);
- If $rA = 62$ the **rinse aid dispenser** works when **WASHING PUMP** is being activated; at the same time voltage is supplied between connectors **L18-L19** (main terminal box);

- For electrical connections refer to electric diagram -

Example

Suppose there is connected an **external detergent dispenser** with a probe into the tank. A typical setting could be:

$dIn = 0$ the dispenser is not activated during filling tank;

$dIn = 181$ the dispenser is supplied during washing phase and the probe automatically dose the right detergent amount.

5. COUNTERS

This Parameter Family collects cycle counters and water consumption counters.

For water consumption counters a flow meter must be installed. See *PPL* (calibration parameter) into *dPA* section (§ Other Parameters).

Ent Counters

Sym.	Parameter Description	Unit	Min	Max	Factory Default
<i>EYc</i>	Cycles performed counter. <i>EYc</i> symbol and two numbers blink consecutively. The cycle number is obtained by joining the two numbers. Ex. <i>EYc</i> → 010 → 042 means 10042 cycles executed.	-			
<i>eyc</i>	Cycle counter (resettable). This counter is similar to <i>EYc</i> but is resettable by user (see <i>r5t</i> parameter below).	-			
<i>nnl</i>	Water Consumption. Counts m ³ of water consumption.	[m ³]			
<i>l</i>	Water Consumption. Counts litres of water consumption. The total consumption is given by adding <i>nnl</i> [m ³] and <i>l</i> [l] values.	[l]			
<i>l it</i>	Water Consumption: resettable counter. Counts the litres of water and is resettable by user (see <i>r5t</i> parameter below).	[l]			
<i>r5t</i>	Reset resettable counters: <i>eyc</i> and <i>l it</i> To reset put 1 this parameter, switch off and then on again: <i>eyc</i> and <i>l it</i> will show zero. Note that <i>eyc</i> is used to count cycles for <i>Eri</i> message (see next parameter, <i>nEY</i>).	-			
<i>nEY</i>	Store thousand of cycles after that <i>Eri</i> message appears on display. Ex. If this parameter is settled to 20, <i>Eri</i> message appears when <i>eyc</i> reach 20.000 cycles.	-			
<i>drcn</i>	Drain/Cleaning cycles performed. Similar to <i>EYc</i> but counts Cleaning Cycles.	-
